

WHY CHOOSE CLOTH Diapers?

Consider your baby's health.

Dioxin Dioxin is the chemical by-product of the paper-bleaching process, using chlorine gas, in the manufacturing of disposable diapers.

- Disposable diapers contain traces of the carcinogenic toxin, Dioxin.
- The EPA lists Dioxin as the most toxic of all cancer-linked chemicals.
- Dioxin is banned in most countries, but not the U.S..

SODIUM POLYACRYLATE This is the chemical, added in powder form to the inner pad of a disposable diaper, to make it super-absorbent.

- Disposables contain sodium polyacrylate, a type of super absorbent polymer (SAP).
- SAP was banned from tampons due to links to toxic shock syndrome.
- This chemical can cause skin irritations and severe allergic reactions including vomiting, staph infections and fever.
